PHYTONUTRIENT GARDENER'S APRIL GUIDE

Basically April is seed sowing time!

In the Phytonutrient Herb Garden

Mulch around the base of your herbs to keep their roots cool and moist, as our weather begins to get warmer.

In the Yard

Plant turf grasses and grass seed. Consider a native grass mix for a full sun corner of your yard. You might try Buffalograss or Blue Grama, both are sturdy native Texas turf grasses.

In the Yard

Fertilize established trees, shrubs and other plants. Use an organic fertilizer such as Lady Bug 8-2-4 or Garden Pep Cottonseed Meal. Continue spraying the landscape with seaweed solution, as often as once a week, in the morning or evening. Use seaweed solution to water in new transplants to help relieve transplant shock and to stimulate rooting.

Now Don't Forget...

Plant "bulbs" of caladium, calla, gladiolus, and water lily.

Keep adding kitchen scraps and grass clippings to your compost pile.

Replenish your mulch!
